

ANEC comments on EC draft delegated regulation amending the 'Common Charger' Directive on updating technical specifications

ANEC welcomes the European Commission draft delegated regulation to amend the references to the technical specifications regarding the charging receptacle and charging communication protocol for all the categories or classes of radio equipment capable of being recharged by means of wired charging.

We would like to highlight our understanding that, according to the new referenced standards (EN IEC 62680-1-2:2022 'Universal serial bus interfaces for data and power - Part 1-2: Common components – USB Power Delivery specification' and standard EN IEC 62680-1-3:2022 'Universal serial bus interfaces for data and power - Part 1-3: Common components - USB Type-C cable and connector specification'), a device fitted with a USB C charging port must be capable of being charged with any USB power supply, including devices designed to use Power Delivery (PD).

ENDS.
